

The **Engineering Education Foundation of America (EEFA)** is a 501(c)(3) charitable organization founded by the **American Council of Engineering Companies of Minnesota**. EEFA's mission is to advance the engineering profession through charitable investments in workforce development, scholarships, education and outreach.

There is a critical workforce shortage in consulting engineering - delivering projects funded by the 2021 Infrastructure Investment & Jobs Act will require a projected 82,000 new engineering and design positions.

Consulting Engineering Firms were already experiencing workforce shortfalls before accounting for the additional work generated by the \$1.2 trillion IJA investments

EEFA's Workforce Development Initiatives and Committees channel energy from volunteers and resources from donors and partners to connect with the future engineering workforce at all ages, through:

- Hands-on classroom activities
- Visits to Colleges & schools
- Exhibits at major gatherings like State Fairs
- And a robust scholarship program

EEFA also partners with ACEC members to promote educational programs to increase retention for the current engineering work force.

Through donations, volunteering, and attending fundraising events, you can join EEFA in our efforts to solve the engineering workforce shortage.
